STAIRLIFTS

INTRODUCING THE ERGO CURVE

The new ergo Curve showcases all of the favourite features that made the original ergo Chair and Curve stairlift so popular. With market leading adjustability in the chair, space saving options, 160kg weight capacity, and a stylish new look, the ergo Curve is the reliable and versatile solution for your stairs.

FEATURES & BENEFITS

1. Stylish Addition

The all new ergo Chair is a stylish addition to the home with unbeatable comfort due to its ability to be adjusted at the point of installation, allowing the chair to be tailored to the user.

2. Swivel Options

The ergo Curve comes with a manual swivel as standard with the option to upgrade to a powered swivel. The swivel function allows you to safely exit the stairlift at the top of the stairs.

The chair can swivel to 35 degrees at the bottom of the stairs (manual swivel only), a perfect feature if the bottom of the stairs is in a confined space.

3. Weight Limit

The standard weight limit of the ergo Curve is 120kg, with the option to upgrade to 160kg, offering increased versatility. The powered swivel and powered footplate are both 160kg compatible.

4. ergo Chair

The ergo Chair comes with multiple space-saving options with a space saver back built in as standard to offer maximum knee clearance for the user with the backrest positioned closer to the wall. The ergo plus pad has a contoured seat base that allows the users knees to drop more freely to the footplate, ideal for the shorter user, or if the user has difficulty bending their knees.

5. Lever-link Footplate

Fitted with a lever-link footplate as standard with the option to upgrade to a powered footplate. Both options make it simple to fold the footplate away without awkward bending.

6. Safety Belt

The interlocked colour co-ordinated seatbelt offers maximum safety, requiring the seatbelt to be fastened to operate the lift.

7. Tilt Function

The lower arm features an interlocking tilt function meaning the lift cannot be operated with the arm in the up position, offering maximum safety for the user.

8. Status Screen

The arm of the ergo Curve features an easy to read diagnostic screen giving real time updates on the status of the lift, to help with fault finding and avoid unnecessary call outs.

The arm controls are easily adjusted and can be positioned on either arm with the option of a rocker or toggle switch to offer the user maximum ease-of-use.

9. Soft Touch Fabrics

The ergo Curve features high quality, soft touch fabrics and handles, giving a quality feel and appearance.

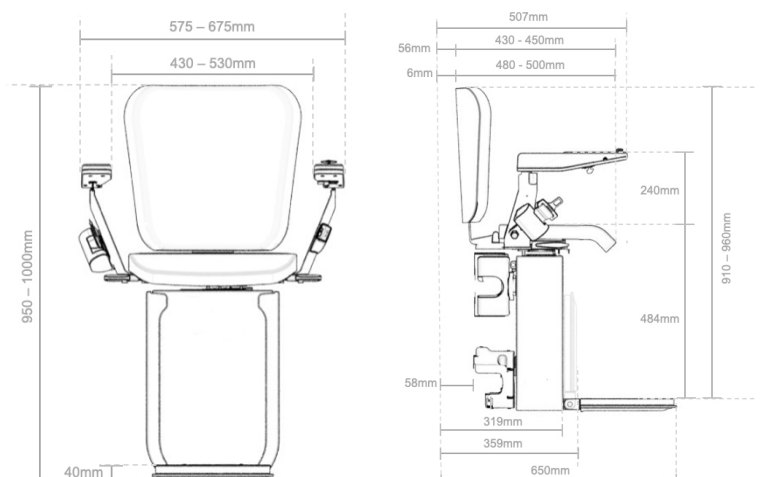

10. Remote Control

Each lift comes with 2 remote controls allowing you to call and park the stairlift at the top or bottom of the stairs.

MEASUREMENTS

Key measurements of the chair and carriage.

Fully compliant and certified to the latest EN81-40 20:20 standards. UK and EC conformity assessed (UKCA and CE marked).
